MB.339 CD

Questa versione rappresenta l'evoluzione della serie C che oltre a mantenere le stesse componenti di strumentazione ed avionica, aggiunge tre schermi multifunzione a cristalli liquidi a colori completamente intercambiabili ed un calcolatore di missione che riceve ed elabora i dati ricevuti. Queste informazioni provengono da: Air Data Computer, che riceve i dati dai vari sensori e li trasforma in segnali digitali, Engine and System data Acquisition Box, che raccoglie tutti i dati del funzionamento del motore e dei vari impianti, sistema di navigazione inerziale a giroscopio laser con integrato un ricevitore GPS che fornisce i dati relativi alla navigazione, Stores Management System che sovrintende allo sgancio dei carichi alari mentre il calcolo della collimazione del bersaglio spetta al calcolatore di missione. A questo si aggiunge la possibilità di simulare intercettazioni radar, di montare pod FLIR, sistemi di addestramento ACMI, videoregistratori dei dati presentati dagli HUD, crash recorder e sonda fissa di rifornimento in volo.

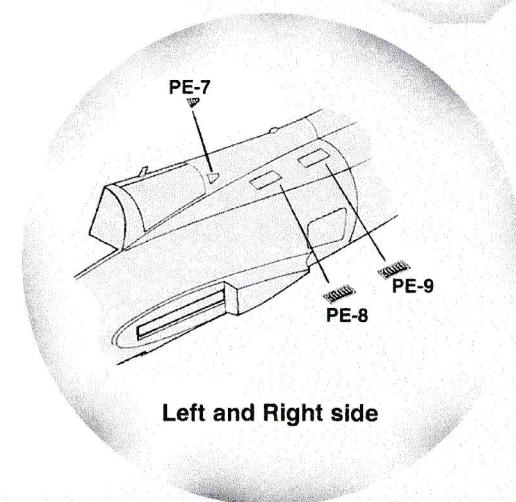

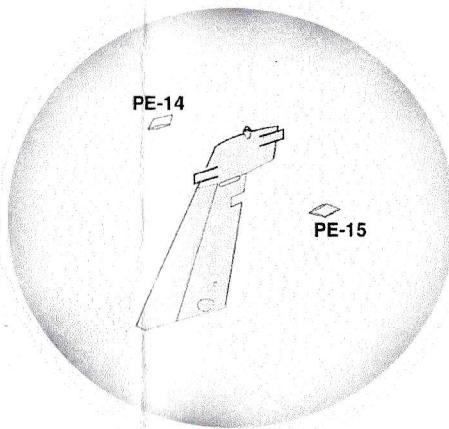

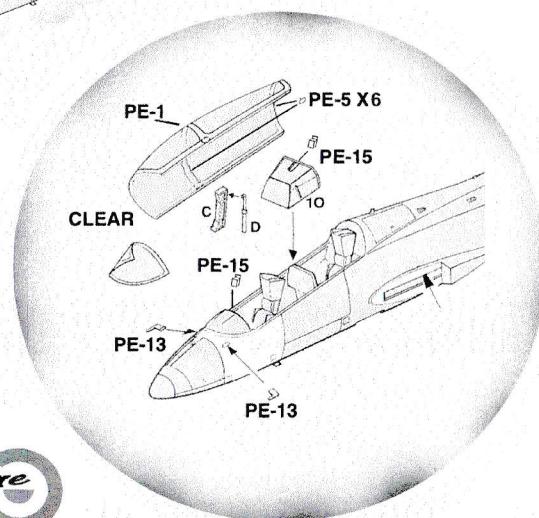

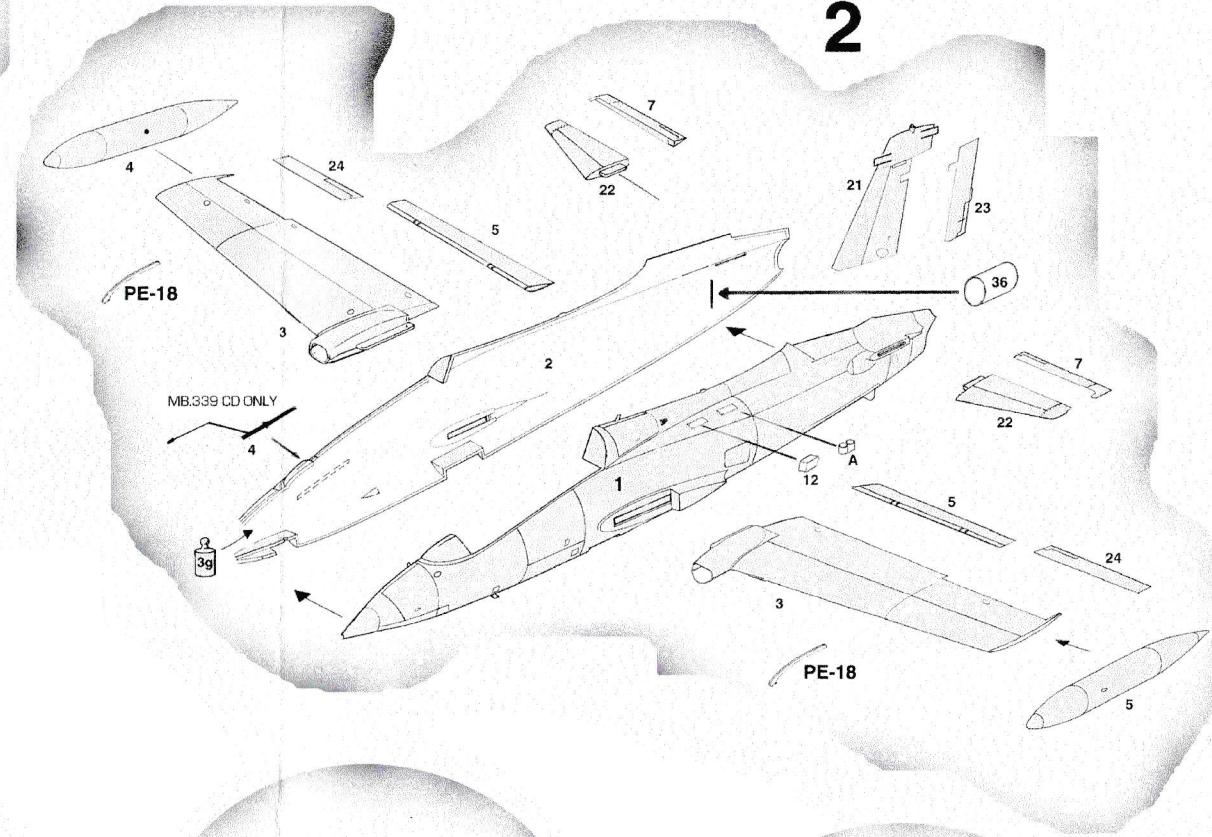

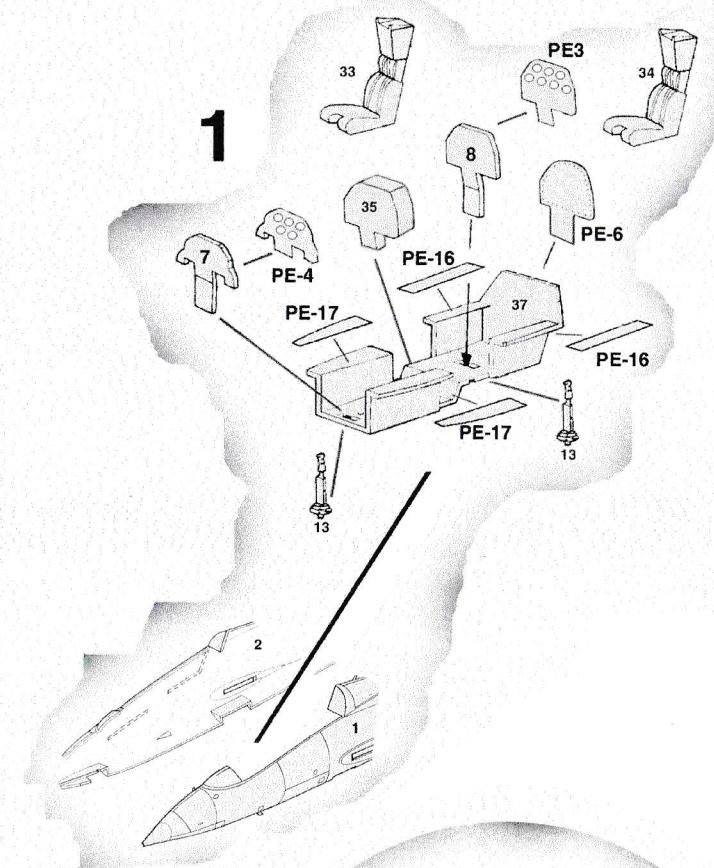

MB.339 CD

This version represents the progression of the series C which besides keeping the same instrumental components and avionics has added three multifunction screens with liquid crystals, completely interchangeable colours and a mission calculator which receives data and then elaborates it. This information comes from; an Air Data computer which receives data from various sensors and transforms it into digital, an Engine and System data Acquisition Box, which collects all the data for the working of the engine and the various systems, a system of inertia navigation with a gyroscope laser integrated with a GPS receiver, which provides the data related to navigation, a Stores Management System, which oversees the releasing of the wing loads while the mission calculator is responsible for lining up the target. We can add to all this; the possibility of simulating radar interceptions, the mounting of a FLIR pod, systems for ACMI training, video recordings of the data presented by the HUD, a crash recorder and a fixed probe for refuelling in flight.

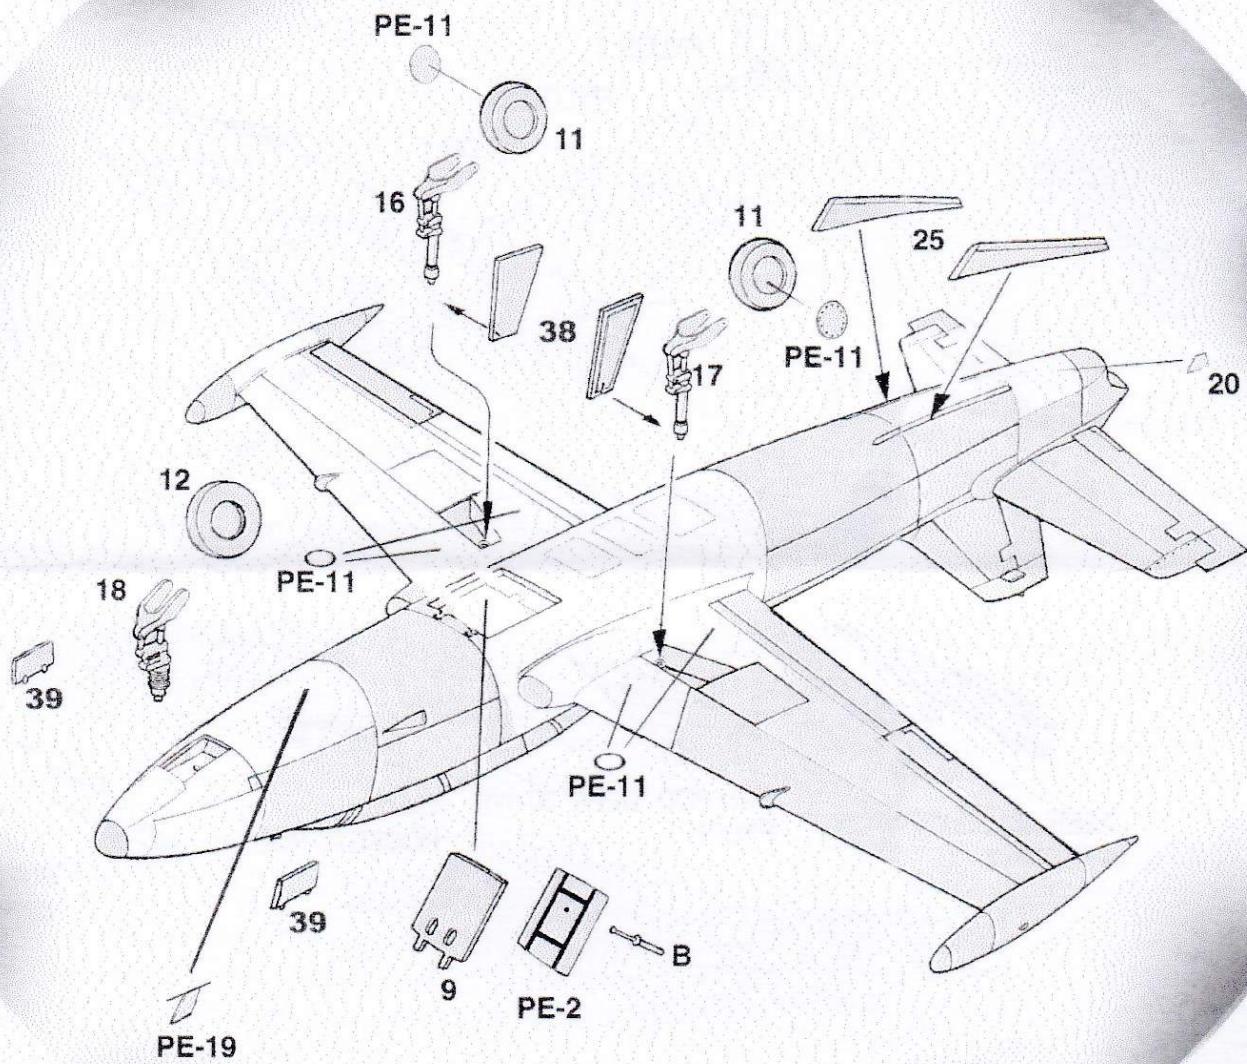

MB.339 CD DATI TECNICI

Apertura Alare	11,2	mt.
Lunghezza	11,2	mt.
Altezza	3,9	mt.
Peso massimo al decollo	6350	Kg.
Velocità massima	900	Km./h
Motore	Rolls Royce Viper 680/43	
Spinta statica	1980	Kg.

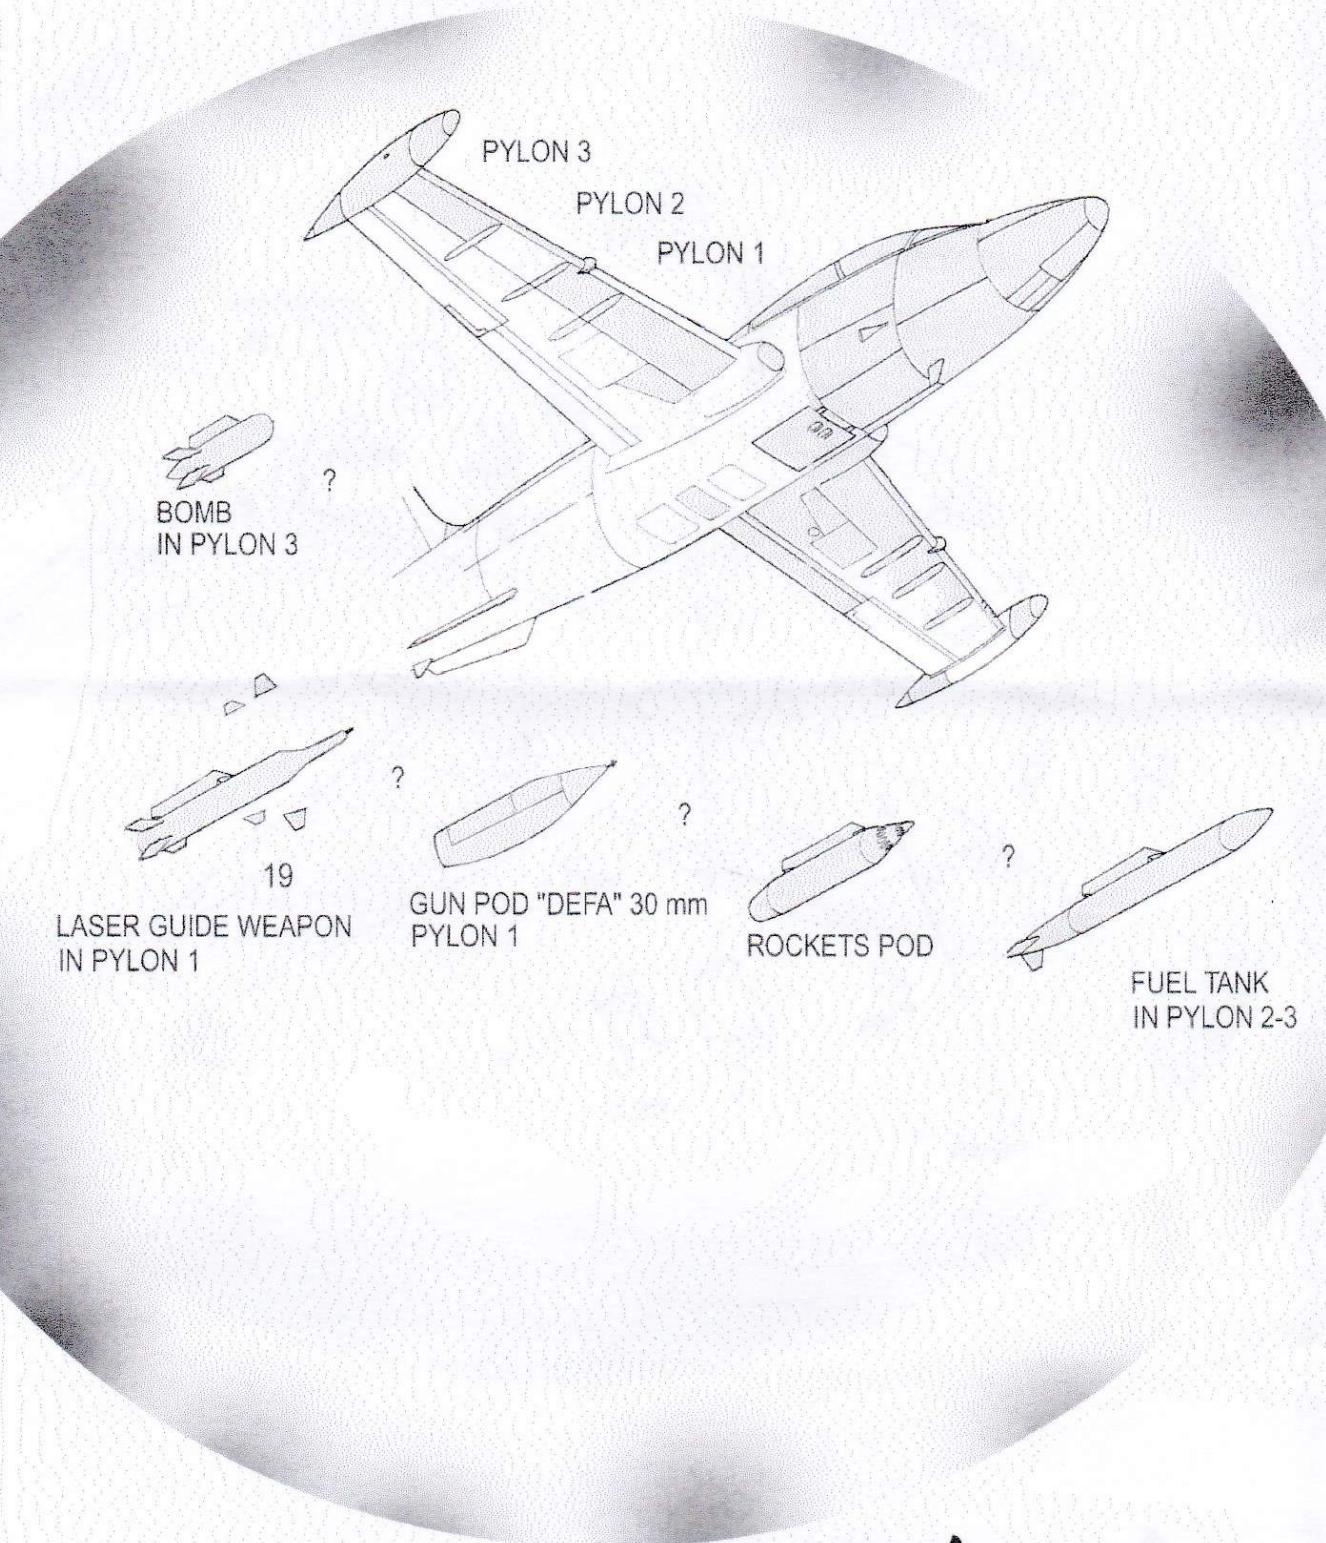

Wing span
Length overall
Height overall
Max. weight take off
Max. level speed
